

C01224T

Carbon Monoxide Detector

Segurança Industrial Equipamentos
 cml@segind.com.br - www.segind.com.br
 (41) 4063-9687 ou 3287-1364

Specifications

Electrical Specifications

System Voltage	
Nominal:	12/24 VDC
Min:	10 VDC
Max:	33 VDC
Avg. Standby Current:	20 mA
Max Alarm Current:	40 mA (75 mA test)
Alarm Contact Ratings:	30 VDC @ 0.5 A
Trouble Contact Ratings:	30 VDC @ 0.5 A
Audible Signal (temp 4 tone):	85 dBA min. in alarm (at 10ft)
Max. Start-up Capacitance:	20 uF

Physical Specifications

Operating Temperature Range:	0° to 40°C (32° to 104°F)
Operating Humidity Range:	22 – 90% %RH
Length:	5.1"
Width:	3.3"
Height:	1.3"
Weight:	7 oz
Wire Gauge Acceptance:	14-22 AWG

NOTICE: This manual shall be left with the owner/user of this equipment.

This product is intended for use in ordinary indoor locations.

General Description

- Listed to UL standard 2075
- 4 wire, system monitored
- Local sounder
- Low current draw
- Alarm relay, Form C
- Trouble relay, Form A
- Dual LED's
- Test/Hush button
- SEMS wiring terminals
- Mount to single gang electrical box or surface mount to wall or ceiling
- Optional drywall anchors included

Figure 1. Alarm Location Diagram:

■ – CARBON MONOXIDE ALARM
 LOCATION FOR MULTI-LEVEL RESIDENCE

Table 1. Detector Operation Modes:

Operation Mode	Green LED	Red LED	Sounder
Normal (standby)	Blink 1 per minute	-	-
Alarm	-	Blink in temp 4* pattern	Sound in temp 4* pattern

*Temp 4 pattern is repeated pattern of four short indications followed by a five second pause.

When the detector has been in alarm for 30 minutes the alarm signal will be given once every minute.

If ambient conditions return to normal, the detector will self-store out of alarm and into Normal (standby) mode.

Hush feature: If required, the audible alarm can be silenced for 5 minutes by pushing the button marked "Test/Hush". The red alarm light will continue to flash in temp-4 pattern. If carbon monoxide is still present after the 5 minute hush period, the audible alarm will sound. The hush facility will not operate at levels above 350 ppm (parts per million) carbon monoxide.

Trouble feature: When the sensor supervision is in a trouble condition (such as a sensor that has been tampered with), the detector will send a trouble signal to the panel. The detector must then be replaced.

End of Life Timer feature: When the detector has reached the end of its life, the trouble contact will open. This indicates that the CO sensor inside the detector has passed the end of its life and must be replaced. This detector's lifespan is approximately six years from the date of manufacture. Refer to Detector Replacement on page 3.

Per UL 2075, it is mandatory that a trouble signal be sent to the panel upon CO cell trouble or cell end of life. Refer to Figure 4 for wiring of the trouble relay.

S0295-00

Installation Guidelines

In a wall location, the detector should be at least as high as a light switch, and at least six inches from the ceiling. In a ceiling location, the detector should be at least 12 inches from any wall.

Where to install, ideally:

- Within 10 feet of all sleeping areas
- Inside the bedroom if it contains a fuel burning appliance
- On every floor of the building
- Ideally, install in any room that contains a fuel burning appliance
- If the appliance in the room is not normally used, such as the boiler room, the detector should be placed just outside the room so the alarm can be heard more easily

Where **NOT** to install, ideally:

- Detectors operate best if not installed within 10 feet of any cooking appliance
- Directly above a sink, cooker, stove or oven
- Next to a door or window that would be affected by drafts i.e. extractor fan or air vent
- Outside
- Do not install in any environment that does not comply with the detector's environmental specifications
- In or below a cupboard
- Where air flow would be obstructed by curtains or furniture
- Where dirt or dust could collect and block the sensor
- Where it could be knocked, damaged, or inadvertently removed

Mounting

The CO1224T can be wall- or ceiling-mounted:

1. To a single gang box, or
2. Direct mount to wall or to ceiling using drywall fasteners.

Figure 2. Mounting of Detector:

Wiring Installation Guidelines

All wiring must be installed in compliance with the NFPA 70, National Electrical Code, applicable state and local codes, and any special requirements of the local Authority Having Jurisdiction (AHJ).

Proper wire gauges should be used. The conductors used to connect carbon monoxide detectors to the alarm control panel and accessory devices should be color-coded to reduce the likelihood of wiring errors. Improper connections can prevent a system from responding properly in the event of a CO.

The screw terminals in the mounting base will accept 14-22 gauge wire. Wire connections are made by stripping approximately 1/4" of insulation from the end of the feed wire, inserting it into the proper base terminal, and tightening the screw to secure the wire in place. Do not put wires more than 2 gauge apart under the same clamping plate.

WARNING: This product does not have a local audible trouble signal, and may fail without supervision if trouble loop remains unconnected.

WARNING: Gas detectors on a zone that is bypassed may not signal a trouble condition. Do not bypass zones used for gas detectors.

Wiring diagrams located on page 4, Figure 4.

Installation

WARNING

Remove power from alarm control unit or initiating device circuits before installing detectors.

1. Using a small, flat head screw driver, push in the small tab located on the underside of the detector. Once the snap is loosened, lift the bottom end of the cover up and unhinge the top to remove the cover.
2. Wire the detector base screw terminals per **Figure 4**.
3. Screw the base of the detector onto a single gang electrical box, or to the surface of the wall or ceiling. Use the hardware included in the packaging.
4. Hinge the top portion of the cover onto the base; with the cover at a 45 degree angle, fit the hinges into the slots of the base.
5. Push the unhinged bottom portion of the cover down until it snaps into place.
6. After all detectors have been installed, apply power to the alarm control unit.
7. Test each detector as described in Testing.
8. Notify the proper authorities that the system is in operation.

CAUTION

Airborne dust particles can enter the detector. System Sensor recommends the removal of detectors before beginning construction or any other dust producing activity.

Carbon monoxide detectors are not to be used with detector guards unless the combination has been evaluated and found suitable for that purpose.

Testing

Detector must be tested after installation.

NOTE: Before testing, notify the proper authorities that maintenance is being performed and the system will be temporarily out of service. Disable the zone or system undergoing maintenance to prevent any unwanted alarms.

Ensure proper wiring and power is applied. After power up, allow 80 seconds for the detector to stabilize before testing.

Test the CO1224T detector as follows:

1. A test button is located on the detector housing (See **Figure 3**).
2. Use the tip of your finger to press and hold the test button.
3. If the sounder beeps and the LED's light up after 1-4 seconds, the detector is operational.

Figure 3. Test Button Location and Operation:

50298-00

If a detector fails the above test method, its wiring should be checked. If the detector still fails after rewiring, it should be replaced.

Functional Gas Test

NOTE: Check with local codes and the AHJ to determine whether or not a functional gas test is desired for an installation.

A canned CO testing agent may be used to verify the detector's ability to sense CO by utilizing the RealTest™ feature of the CO1224T as follows:

1. Press the test button as described in Testing above. Release the test button after the sounder beeps and the LED's light up.
2. The detector will enter the speed-up test mode, indicated by a quick flashing green LED.
3. Within 20 seconds, apply a UL listed CO agent within 1/4" of the detector's gas entry ports (see Figure 3). The detector will quickly go into alarm if gas entry is successful.
4. The detector will automatically exit the speed-up test mode 20 seconds after entering speed-up test mode.

Testing the detector will activate the alarm relay and send a signal to the panel.

CAUTION: This carbon monoxide detector is designed for indoor use only. Do not expose to rain or moisture. Do not knock or drop the detector. Do not open or tamper with the detector as this could cause malfunction. The detector will not protect against the risk of carbon monoxide poisoning if not properly wired. The detector will only indicate the presence of carbon monoxide gas at the sensor. Carbon monoxide gas may be present in other areas.

This carbon monoxide detector is NOT:

- Designed to detect smoke, fire or any gas other than carbon monoxide
- To be seen as a substitute for the proper servicing of fuel-burning appliances or the sweeping of chimneys.
- To be used on an intermittent basis, or as a portable alarm for the spillage of combustion products from fuel-burning appliances or chimneys.

Carbon monoxide gas is a highly poisonous gas which is released when fuels are burnt. It is invisible, has no smell and is therefore impossible to detect with the human senses. Under normal conditions in a room where fuel burning appliances are well maintained and correctly ventilated, the amount of carbon monoxide released into the room by appliances should not be dangerous.

Symptoms of carbon monoxide poisoning: Carbon monoxide bonds to the hemoglobin in the blood and reduces the amount of oxygen being circulated in the body. The following symptoms are related to carbon monoxide poisoning and should be discussed with all members of the household:

- Mild exposure: Slight headache, nausea, vomiting, fatigue (often described as "flu-like" symptoms).
- Medium exposure: Severe throbbing headache, drowsiness, confusion, fast heart rate.
- Extreme exposure: Unconsciousness, convulsions, cardio-respiratory failure, death.

Many causes of reported carbon monoxide poisoning indicate that while victims are aware that they are not well, they become so disoriented that they are unable to save themselves by either exiting the building or calling for assistance.

Also young children and pets may be the first to be affected.

What to do if the carbon monoxide detector goes into alarm:

Immediately move to a spot where fresh air is available, preferably outdoors. Find a phone in an area where the air is safe and call your security service provider. Tell your provider the detector alarm status, and that you require professional assistance in ridding your home of the carbon monoxide.

IMPORTANT: This detector should be tested and maintained regularly following National Fire Protection Association (NFPA) 720 requirements.

Maintenance

Occasionally clean the outside casing with a cloth. Ensure that the holes on the front of the alarm are not blocked with dirt and dust.

Do not paint, and do not use cleaning agents, bleach, or polish on the detector.

Detector Replacement

This detector is manufactured with a long-life carbon monoxide sensor. Over time the sensor will lose sensitivity, and will need to be replaced with a new System Sensor carbon monoxide detector. This detector's lifespan is approximately six years from the date of manufacture.

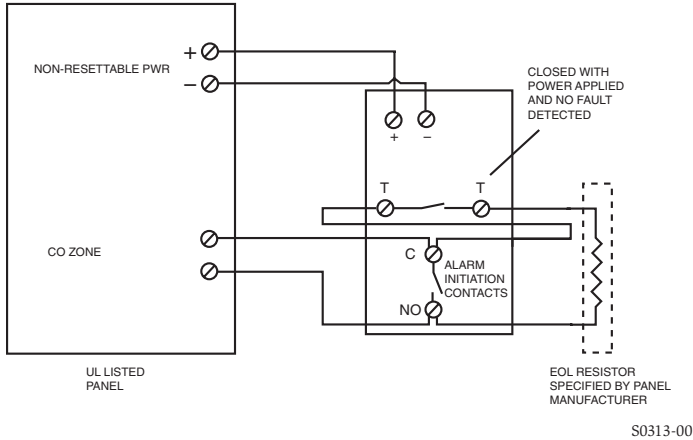

Periodically check the detector's replacement date. Remove the detector cover and refer to the sticker placed on the inside of the detector. The sticker will indicate the date that the detector should be replaced.

This detector is also equipped with a feature that will open the trouble relay once it has reached the end of its useful life. If this occurs, it is time to replace the detector.

NOTE: Before replacing the detector, notify the proper authorities that maintenance is being performed and the system will be temporarily out of service. Disable the zone or system undergoing maintenance to prevent any unwanted alarms. Dispose of detector in accordance with any local regulations.

Figure 4. Wiring Diagram:

SINGLE UNIT, SINGLE ZONE, 4 CONDUCTOR CABLE

CAUTION

It should be noted the installation, operation, testing and maintenance of the CO1224T is different than System Sensor conventional 4-wire smoke detectors, such as the i3 Series. Below are specific installation requirements for the CO1224T:

- * Connect to a non-resettable power supply
- * Connect to a non-fire zone: Per NFPA 720 section 5.3.7.2 the CO1224T shall not be connected to a zone that signals a fire condition
- * Per NFPA 720 section 5.3.7, do not connect the CO1224T on a zone with other fire or intrusion initiating devices - i.e. do not connect on the same zone as smoke detectors
- * Wiring of the trouble relay is mandatory: Per UL Standard 2075 section 17.1.1 a detector shall send a trouble signal to the control panel upon an open circuit, a ground fault, sensor removal or sensor end of life
- * If wiring one CO1224T per zone: Use 4 conductors
- * If wiring multiple CO1224T detectors per zone: Use 4 conductors from panel to first CO1224T, then use 6 conductors from the second CO1224T to other detectors on the zone

MULTIPLE UNIT, SINGLE ZONE, 6 CONDUCTOR CABLE

Input powered (12 or 24 VDC) from UL Listed Fire/Burg Control Panel (Class 2).

S0300-01

Please refer to insert for the limitations of Carbon Monoxide Detectors

FCC Statement

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Three-Year Limited Warranty

System Sensor warrants its enclosed product to be free from defects in materials and workmanship under normal use and service for a period of three years from date of manufacture. System Sensor makes no other express warranty for the enclosed product. No agent, representative, dealer, or employee of the Company has the authority to increase or alter the obligations or limitations of this Warranty. The Company's obligation of this Warranty shall be limited to the replacement of any part of the product which is found to be defective in materials or workmanship under normal use and service during the three year period commencing with the date of manufacture. After phoning System Sensor's toll free number 800-SENSOR2 (736-7672) for a Return Authorization number, send defective units postage prepaid to: System Sensor, Returns

Department, RA # _____, 3825 Ohio Avenue, St. Charles, IL 60174. Please include a note describing the malfunction and suspected cause of failure. The Company shall not be obligated to replace units which are found to be defective because of damage, unreasonable use, modifications, or alterations occurring after the date of manufacture. In no case shall the Company be liable for any consequential or incidental damages for breach of this or any other Warranty, expressed or implied whatsoever, even if the loss or damage is caused by the Company's negligence or fault. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. This Warranty gives you specific legal rights, and you may also have other rights which vary from state to state.
